## **DETAILED ACTION**

### ***Drawings***

1. Color photographs and color drawings are acceptable only for examination purposes unless a petition filed under 37 CFR 1.84(a)(2) is granted permitting their use as acceptable drawings. In the event that applicant wishes to use the drawings currently on file as acceptable drawings, a petition must be filed for acceptance of the color photographs or color drawings as acceptable drawings. Any such petition must be accompanied by the appropriate fee set forth in 37 CFR 1.17(h), three sets of color drawings or color photographs, as appropriate, and, unless already present, an amendment to include the following language as the first paragraph of the brief description of the drawings section of the specification:

The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

Color photographs will be accepted if the conditions for accepting color drawings have been satisfied.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 rejected under 35 U.S.C. 102(b) as being anticipated by Soga et al. (JP-2002-293657, translation included).

Art Unit: 1775

With respect to claims 1 and 5, Soga discloses an inorganic porous composite comprising a porous bone structure having open pores and a frame component containing a particulate material (embodiment [0003]).

Soga also discloses that the inorganic porous composite comprising open pores including the particulate material dispersed in the frame phase and the pore size becomes smaller with the addition of the particulate material (embodiments [0003] and [0011]). Accordingly, Soga discloses the inorganic porous product has the particles dispersed and exposed to the wall surfaces of the porous frame phase as claimed. The wall surfaces of the porous frame phase are considered facing the open pores.

Soga further discloses the pore sizes and shapes distribution are made uniform (abstract and embodiments [0002]-[0003]) by the same sol-gel transition accompanied by phase transition as claimed (embodiment [0003]).

With respect to claim 2, Soga discloses the open pores having a diameter of 100 nm or large.

With respect to claims 3-4, Soga discloses the particulate material may be metallic oxide or organic macromolecule ("polymer") and/or metal with particles diameter of 5 nm or larger and 100um or smaller (embodiment [0010]).

Soga meets all the limitations of claims 1-4.

### ***Claim Rejections - 35 USC § 102/103***

3. Claim 6 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Soga et al.

Art Unit: 1775

As stated above, Soga discloses the same inorganic porous composite as recited in claim 1.

Soga does not specify the particles dispersed in the porous frame phase having an average aspect ratio less than 1.5. However, Soga discloses the pore sizes and shapes distribution are made uniform (abstract and embodiments [0002]-[0003]) with the particles dispersed on the porous frame phase. In order to made the pore shapes of the particle to be uniform, the average aspect ratio of the particle should be as close to 1.0 as possible.

Therefore, it would have been obvious to one of ordinary skill in the art to use the particle for dispersion with an average aspect ratio as close to 1.0 as possible or less than 1.5 in order to homogenously disperse the particles on the porous frame phase and obtain the inorganic porous structure with uniform pore shape and pore sized distribution, as suggested by Soga (abstract).
